Wide Band AC Power Amplifier
10MHz-1000MHz

Product Description

RAMP01050 is a wide band AC power amplifier with a frequency range of 10 to 1000MHz.

The power output of this amplifier is 36dBm typical. The typical gain is 25 dB with a gain flatness of ±1.0dB.

The AC power amplifier uses a standard convenient 110V/220 VAC power supply.

Features

- Wide band AC power Amplifier
- Small Signal Gain 26dB Typical
- Output Saturation Power 36dBm Typical
- Supply Voltage 110/220 VAC
- 50 Ohm Matched Input / Output

Typical Applications

- Wireless Infrastructure
- Military and Aerospace Applications
- Test Instrumentation
- Radar Systems
- 5G Wireless Communications
- Microwave Radio Systems
- TR Modules
- Research and Development
- Cellular Base Stations

Electrical Specifications (T_A=+25ºC)

Parameter	Min	Typ	Max	Min	Typ	Max	Units
Frequency Range	10		500	500		1000	MHz
Gain	24	26		24	26		dB
Gain Flatness		±1.0			±1.0		dB
Gain Variation Over Temperature (-40℃~+85℃)		±1.0			±1.0		dB
Input VSWR		1.5			1.7		: 1
Output 1dB Compression Point (P1dB)	32	33		31	32		dBm
Saturated Output Power (Psat)		36			34		dBm
Isolation S12			-60				dB
Supply Current (AC=220V)			60				mA
Weight			2.57 Max.				lbs.
Impedance			50				Ohms
Input / Output Connectors			SMA-Female				
Package			Epoxy Sealed (Standard)				
			Hermetically Sealed (Optional)

Absolute Maximum Ratings

Parameter	Rating
Supply Voltage Range	110 to 240 VAC
*RF Input Power (RFIN)	+16dBm

Bias Up Procedure

1. Connect input and output with 50 Ohm source and load with in band return loss better than 10dB.
2. Connect AC Plug
3. Flip switch to “ON” position

Bias Down Procedure

1. Flip switch to “OFF” position
2. Remove AC Plug
3. Remove RF Connection

Environmental Specifications and Test Standards

Parameter	Description
Operational Temperature	-40ºC to +85ºC (Case Temperature)
Storage Temperature	-50ºC to +105ºC
Thermal Shock	-40ºC → +85ºC (5 Cycles / 10 hours)
**Random Vibration	MIL-STD-202G Table 214-I, Test Condition Letter C 1.5 Hours Per Axis
High Temperature Burn In	Temperature +85ºC for 72 Hours
Shock	1. Weight >20g, 50g half sine wave for 11ms, Speed variation 3.44m/s 2. Weight <=20g, 100g Half sine wave for 6ms, Speed variation 3.75m/s 3. Total 18 times (6 directions, 3 repetitions per direction).
Altitude	Standard: 30,000 Ft (Epoxy Sealed Controlled Environment) Optional: Hermetically Sealed (60,000 ft. 1.0 PSI min)
Hermetically Sealed (Optional)	MIL-STD-883 (For Hermetically Sealed Units)

*Maximum RF input power is set to assure safety of amplifier. Input power may be increased at own risk to achieve full power of amplifier. Please reference gain and power curves.
**For vibration testing details please see additional information section.

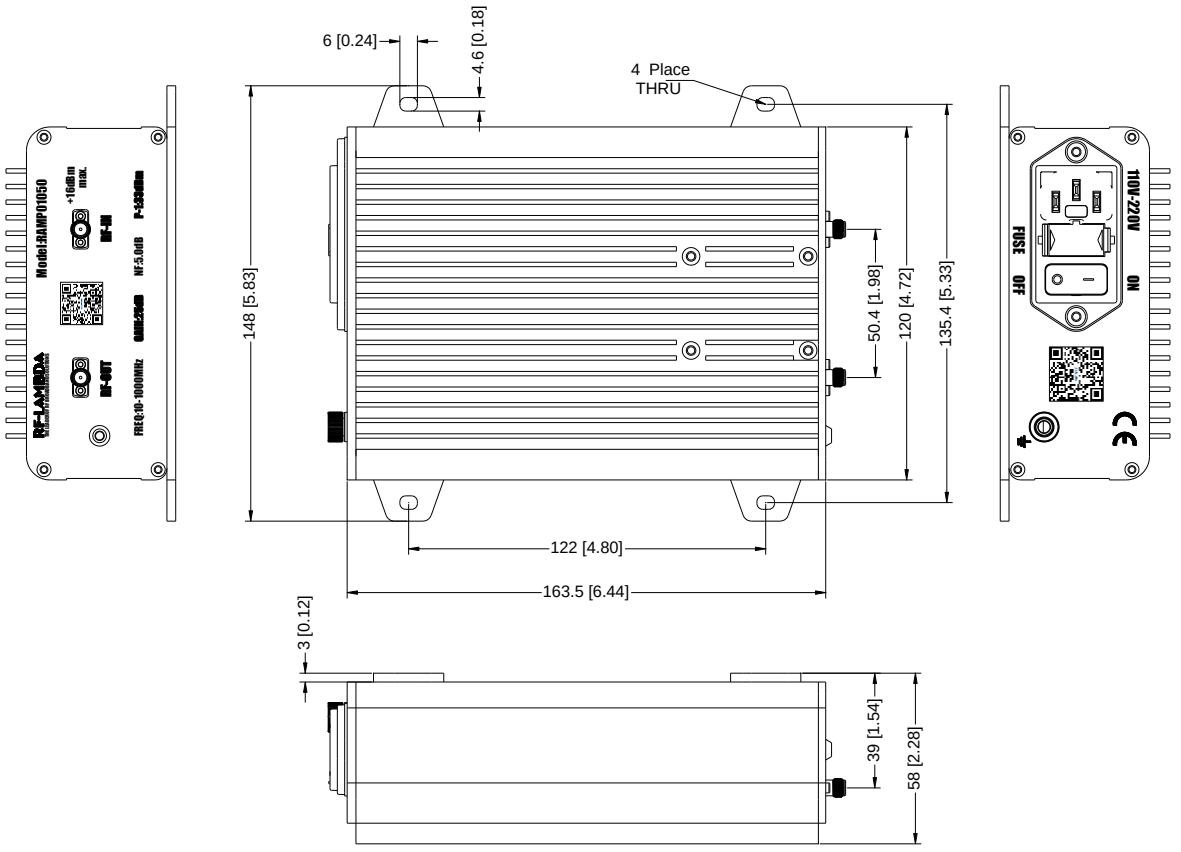
Outline Drawing



Notes:
1. Package Material: Aluminum
2. Finish: Black Paint
3. All dimensions are in millimeters [inches].
4. Housing Tolerances ±1.5 [0.06] unless otherwise specified.
5. Heat sink required during operation (sold separately). Matching heatsink is listed on our website. If customer would like to use their own cooling method, please make sure the amplifier will operate under the specs that listed in page 2 of this datasheet.
6. Standard torque wrench must be used to secure RF connectors.

RAMP01050	Standard	10MHz-1000MHz AC Power Amplifier

Amplifier Use

Ensure that the amplifier input and output ports are safely terminated into a proper 50 ohm load before turning on the power. Never operate the amplifier without a load. A proper 50 ohm load is defined as a load with impedance less than 1.9:1 or return loss larger than 10dB relative to 50 Ohm within the specified operating band width.

Power Supply Requirements
Power supply must be able to provide adequate current for the amplifier. Power supply should be able to provide 1.5 times the typical current or 1.2 times the maximum current (whichever is greater).

In most cases, RF - Lambda amplifiers will withstand severe mismatches without damage. However, operation with poor loads is discouraged. If prolonged operation with poor or unknown loads is expected, an external device such as an isolator or circulator should be used to protect the amplifier.

Ensure that the power is off when connecting or disconnecting the input or output of the amp.

Prevent overdriving the amplifier. Do not exceed the recommended input power level.

Adequate heat-sinking required for RF amplifier modules. Please inquire.

Amplifiers do not contain Thermal protection, Reverse DC polarity or Over voltage protection with the exception of a few models. Please inquire.

Proper electrostatic discharge (ESD) precautions are recommended to avoid performance degradation or loss of functionality.

What is not covered with warranty?

Each RF - Lambda amplifier will go through power and temperature stress testing.
Since the die, ICs or MMICs are fragile, these are not covered by warranty. Any damage to these will NOT be free to repair.
