

## Wide Band Low Noise Amplifier 26GHz–40GHz

### Product Description

RLNA26G40GB2 is a wideband low noise amplifier with a frequency range of 26 to 40GHz.

The 1dB compression point of this amplifier is 22 dBm typical. The typical small signal gain is 22 dB with a gain flatness of  $\pm 1.5$ dB.

The power amplifier's input connector is 2.92mm and output connector is 2.92mm.

The operating temperature of this product is within -40 to +85°C.

### Features

- Wideband Low Noise Amplifier
- Small Signal Gain 22dB Typical
- Output P1dB 22dBm Typical
- Supply Voltage +4.8VDC
- 50 Ohm Matched Input/Output
- Gain Flatness +/-1.5dB

### Typical Applications

- Wireless Infrastructure
- Military and Aerospace Applications
- Test Instrumentation
- Radar Systems
- 5G Wireless Communications
- Microwave Radio Systems
- TR Modules
- Research and Development
- Cellular Base Stations

### Electrical Specifications (T<sub>A</sub>=+25°C)

Parameter	Min	Typ	Max	Min	Typ	Max	Units
Frequency Range		26 to 32			32 to 40		GHz
Small Signal Gain		22			21		dB
Gain Flatness		+/-1.5			+/-1.5		dB
Gain Variation Over Temperature (-40°C to +70°C)		+/-0.5			+/-0.5		dB
Input Return Loss		-15			-15		dB
Output Return Loss		-10			-10		dB
Noise Figure		8			8		dB
Output 1dB Compression Point (P1dB)		22			21		dBm
Saturated Output Power (Psat)		23			21.5		dBm
Supply Current		300			300		mA
Weight					57.35		g.
Impedance					50		Ohms
Input / Output Connectors					2.92mm (Input) – 2.92mm (Output)		
Package					Epoxy Sealed (Standard)		
					Hermetically Sealed (Optional)		

**Absolute Maximum Ratings**

Parameter	Rating
Positive Supply Voltage Range	+4.8VDC to +5.5VDC
Negative Supply Voltage Range	-4.95VDC to -5.05VDC
*RF Input Power (RFIN)	Psat – Large Signal Gain

**Bias Up Procedure**

1. Connect ground
2. Connect input and output with 50 Ohm source/load.  
(In band VSWR < 1.9:1 or >10dB return loss.)
3. Connect Negative supply
4. Connect positive supply and make sure power supply can handle max current.

**Bias Down Procedure**

1. Turn off positive power supply
2. Turn off negative power supply
3. Remove positive supply connection
4. Remove negative supply connection
5. Remove RF connection
6. Remove ground

**Environmental Specifications and Test Standards**

Parameter	Description
Operational Temperature	-40°C to +85°C (Case Temperature)
Storage Temperature	-55°C to +125°C
Thermal Shock	-40°C → +85°C (5 Cycles / 10 hours)
**Random Vibration	MIL-STD-202G Table 214-I, Test Condition Letter C 1.5 Hours Per Axis
High Temperature Burn In	Temperature +85°C for 72 Hours
Shock	1. Weight >20g, 50g Half sine wave for 11ms, Speed variation 3.44m/s 2. Weight <=20g, 100g Half sine wave for 6ms, Speed variation 3.75m/s 3. Total 18 times (6 directions, 3 repetitions per direction).
Altitude	Standard: 30,000 Ft (Epoxy Sealed Controlled Environment) Optional: Hermetically Sealed (60,000 ft. 1.0 PSI min)
Hermetically Sealed (Optional)	MIL-STD-883 (For Hermetically Sealed Units)

\*Maximum RF input power is set to assure safety of amplifier. Input power may be increased at own risk to achieve full power of amplifier. Please reference gain and power curves.

\*\*For vibration testing details please see additional information section.

Typical Performance Plots

**Notes:**

1. Package Material: Aluminum and Copper
2. Plating: Gold
3. All dimensions are in millimeters [inches].
4. Tolerances  $\pm 0.25$  [0.010] unless otherwise specified.
5. Heat sink required during operation (sold separately). Matching heatsink is listed on our website. If customer would like to use their own cooling method, please make sure the amplifier will operate under the specs that listed in page 2 of this datasheet.

**Ordering Information**

Part Number	Modification	Description
RLNA26G40GB2	Input connector 2.92mm and Output connector 2.92mm	26GHz-40GHz Low Noise Amplifier

**Amplifier Use**

Ensure that the amplifier input and output ports are safely terminated into a proper 50 ohm load before turning on the power. Never operate the amplifier without a load. A proper 50 ohm load is defined as a load with impedance less than 1.9:1 or return loss larger than 10dB relative to 50 Ohm within the specified operating band width.

Power Supply Requirements

Power supply must be able to provide adequate current for the amplifier. Power supply should be able to provide 1.5 times the typical current or 1.2 times the maximum current (whichever is greater).

In most cases, RF - Lambda amplifiers will withstand severe mismatches without damage. However, operation with poor loads is discouraged. If prolonged operation with poor or unknown loads is expected, an external device such as an isolator or circulator should be used to protect the amplifier.

Ensure that the power is off when connecting or disconnecting the input or output of the amp.

Prevent overdriving the amplifier. Do not exceed the recommended input power level.

Adequate heat-sinking required for RF amplifier modules. Please inquire.

Amplifiers do not contain Thermal protection, Reverse DC polarity protection or Over voltage protection with the exception of a few models. Please inquire.

Proper electrostatic discharge (ESD) precautions are recommended to avoid performance degradation or loss of functionality.

**What is not covered with warranty?**

Each RF - Lambda amplifier will go through power and temperature stress testing.

Since the die, ICs or MMICs are fragile, these are not covered by warranty. Any damage to these will NOT be free to repair.
